Design of the cover and Part headers is by Stella Damaschin.

Body text is 10pt Garamond.

AUTHOR'S FOREWORD

This, the second edition of *The Firebird Book*, has been gestating for more than seven years, since the first edition in August, 2004. The first book's milestone was Firebird 1.5. Its objective was to provide an up-to-date working reference for developers, whether coming to Firebird from another database management system or moving into it with past experience in its closed source cousin, InterBase.

In the intervening years, Firebird has evolved through three further major versions: 2.0, 2.1 and 2.5. At the time of this writing, all three are still under maintenance and the re-architected version 3.0 is in alpha development. Maintenance of version 1.5 ceased in 2009.

The energy and dedication of Firebird's development team continue to be a source of wonder and inspiration to me and, I'm sure, to anyone else who works with Firebird. The polyglot Core team—Dmitry Yemanov, Vlad Khorsun, Alex Peshkov and Adriano dos Santos Fernandes—works closely and tirelessly under Dmitry's chieftainship. Pavel Cisar and Philippe Makowski perform quality assurance testing and Claudio Valderrama is responsible for scrutinising incoming code changes. Claudio's hand is often seen in improvements to the command-line tools, as well.

Because Firebird is distributed free, in all senses of the word, it produces no revenue to pay salaries to the code workers. Except for the QA people, these volunteers depend on Firebird Foundation grants to supplement their incomes to make space for their Firebird work.

The Firebird Foundation is funded by donations, cash sponsorships and membership subscriptions from individuals and companies that perceive and acknowledge the benefits of using Firebird and keeping it under active development. You can view the current list of sponsors at <http://www.firebirdsql.org/en/sponsors/>. Bless 'em all!

Some sponsors contribute much more than cash. IBPhoenix, for example, contributes the manpower for QA, binary builds and basic documentation. Neither this book nor its predecessor would have come to fruition without IBPhoenix funding. Broadview Software hosts the issue tracker, pre-release and build servers while IBSurgeon funds the hosting and development of the Firebird web site at www.firebirdsql.org.

Amongst the volunteers who contribute their time and expertise to the Firebird Project without grants I must name Paul Vinkenoog, who has been almost single-handedly responsible for filling the free documentation gap between the legacy InterBase manuals and the release notes that are distributed with the binary kits. It is a vast and ongoing task that is often thankless. At the time of writing this, Paul is working with Dmitry Yemanov to produce comprehensive on-line SQL documentation that will not be inhibited by the copyright issues that prohibit reuse of the legacy InterBase material.

Under the Firebird Project umbrella, volunteers also develop and maintain several of the drivers and language interfaces for Firebird—Jaybird (for Java), the Firebird .NET providers, the ODBC driver and the interfaces for PHP and Python.

If you are coming to Firebird as a newcomer, welcome! I wish you a long and happy experience with our software. To you and to those devotees who are freshening up your Firebird experience, I wish you great satisfaction from your use of this Second Edition of *The Firebird Book*.

Helen Borrie, author

December 2011

ABOUT THE AUTHOR

Helen Borrie is a contracting software engineer who doubles as a writer and technical editor. She has been involved with database development for 30 years and with Firebird and its ancestors since 1996.

Helen is an active member of the Firebird online support community and a founding member of the Firebird Foundation, incorporated as a non-profit organisation in New South Wales, Australia, in 2002.

Contents

Author's Foreword	iii
About the Author.....	v
Part I Firing Up with Firebird.....	1
1 Firebird Servers and Clients	3
The Role of the Server.....	3
Operating System Platforms	4
Databases	4
Server-side Programming.....	4
Multi-database Applications.....	6
Server Security	6
Database Security.....	7
The Firebird Server Models.....	7
Resource Usage	7
Comparing Superserver, Superclassic and Classic Architectures.....	8
Embedded Server.....	13
Introduction to Client/Server	13
Servers and Clients.....	13
Client/Server vs File-Served Databases	14
Characteristics of a Client/Server DBMS.....	14
Typical Deployment Topologies.....	17
Firebird Clients.....	20
What is a Firebird Client?.....	21
The Firebird Client Libraries	21

2 Installation	23
System Requirements	23
Server Memory (All Platforms)	23
Installation Drives	24
Minimum Machine Specifications	24

Part II Firebird Data Types & Domains.....	97
6 About Firebird Data Types.....	99
The Basics.....	99
Where to Specify Data Types	99
Supported Data Types.....	99
SQL “Dialects”.....	100
Optional SQL-92 Delimited Identifiers	101
Context Variables.....	101
Pre-defined Date Literals.....	102
Columns	103
Domains	104
Converting Data Types	104
Changing column and domain definitions	105
Keywords Used for Specifying Data Type	106
Demystifying NULL	107
NULL in expressions.....	107
NULL in calculations	108
Gotchas with True and False.....	108
Setting a value to NULL	108

7 Number Types	111
Numerical Limits	111
Points About Points.....	112
Operations on Number Types.....	112
Integer Types	112
Notation	112
Types.....	113
Integer/integer division.....	114
Fixed Decimal (Scaled) Types	115
Internal Storage	116
Special restrictions in static SQL.....	117
Behaviour of fixed types in operations	117
Floating Point Types	120
Supported Float Types.....	121
Arithmetic mixing fixed and floating-point types.....	121
8 Date and Time Types	123
Choices for Date and Time Values	123
DATE.....	123
TIMESTAMP.....	124
TIME	124
Date/Time Literals.....	125
Recognised Date/Time Literal Formats	125
Pre-defined Date Literals.....	128
Type-casting of Date/Time Literals	129
Date and Time Context Variables	130
Specifying Sub-seconds Precision	130
Operations Using Date and Time Values	131
General rules for operations	132
Using CAST() with Date/Time Types.....	133
Quick Date/Time Casts.....	136
The EXTRACT() Function	136
Other Date/Time Functions.....	138
A sample date/time type conversion task.....	138

9 Character Types	141
String Essentials	141
String Delimiter	142
Concatenation	142
Escape Characters	142
String Functions	143
Limitations with Character Types	144
Fixed-length Character Data	145
Variable-length Character Data	145
Character Sets and Collation Sequences	146
Character Sets	147
Client Character Set	148
Firebird character sets	149
Special Character Sets	152
Transliteration	154
Collation Sequence	155
Adding an Alias for a Character Set	159
Custom character sets and collations	160
Metadata Text Conversion	164
10 BLOBS and Arrays	167
BLOBs and Subtypes	167
Supported User Subtypes	168
Custom Subtypes	168
Declaration Syntax	169
BLOB Segments	169
When to Use BLOB Types	170
Operations on BLOBs	171
Array Types	173
ARRAY Types and SQL	173
When to Use an Array Type	173
Eligible Element Types	173
Defining Arrays	174
Storage of ARRAY Columns	175
Accessing Array Data	175
Limited DSQL Access	176

11 Domains.....	177
Benefits of Using Domains	177
Creating a Domain	178
Using a Domain	182
Domains in Column Definitions.....	182
Domains in PSQL Variable Declarations.....	184
Using Domains with CAST().....	184
Where domains won't work.....	185
Defining a BOOLEAN Domain.....	185
Changing a Domain Definition.....	185
Dropping a Domain.....	187

35 Configuring and Managing Databases	689
The <i>gfix</i> Tool Set	689
Using the Tools	690
Shutting Down a Database	690
Configuration Options.....	693
Default Cache Size	693
Forced Writes	694
Access Mode.....	695
Page Fill Capacity	696
Sweep Interval	696
SQL Dialect	697
Page Size	698
Management Tools.....	698
Garbage collection	699
Sweeping	699
Analysing and Repairing Logical Corruption	700
Transaction recovery	701
Managing Database Shadows	703
Summary of <i>gfix</i> switches and options	704
<i>gfix</i> error messages	706
Part VIII Administering & Securing Firebird	707
36 Protecting the Server and its Environment	709
Securing the Environment.....	709
Physical Security.....	709
Use Secureable Filesystems	710

Protect Backups	710
Platform-based protection.....	710
Wire Security.....	714
Web and Other n-Tier Applications	714
Use Dedicated Hosts	714
Establish Trustworthiness	714
Firewalls	715
Server Multi-hop	715
Denial-of-Service Attacks	715
Managing User Access	716
The Security Database	716
Firebird “Native” Users.....	717
Platform Users	717
Privileged Users	719
Entering User Credentials via SQL.....	720
The <i>gsec</i> Utility.....	722
37 Database-Level Security.....	729
Default Security and Access.....	729
Planning an Access Scheme.....	730
Metadata Tables	730
SQL Privileges	730
Objects	731
Users	731
Native Firebird users	732
POSIX users and groups	732
Windows trusted users.....	732
Users with escalated privileges.....	733
Database objects as ‘users’.....	733
Privilege Restrictions	733
Granting Privileges	734
UPDATE rights on columns.....	734
REFERENCES rights on columns	735
Privileges needed by objects	736
Granting the EXECUTE privilege	736
Privileges on Views	737

Bundling Multiple Privileges	737
Lists of privileges	737
The ALL privilege	738
Roles	738
Privileges for Multiple Users	739
Granting the Right to Grant Privileges	740
Granting Privileges on Behalf of Another	741
The GRANTED BY clause.....	742
The System Role RDB\$ADMIN.....	742
Extending RDB\$ADMIN power for Windows Administrators.....	742
Unintended Effects with Privileges.....	743
Revoking Privileges	744
Using REVOKE	744
Security Scripts	747
Creating a script	748
Installing perms directly from a procedure	750
A Trick to Beat Idiot Users and Bad Guys.....	752
38 Monitoring and Logging Features.....	753
Monitoring Database Activity	753
How Monitoring Works.....	753
Using MON\$	754
The MON\$ Tables.....	757
Trace and Audit Services	757
Modes of Use	757
Trace Sessions	758
Trace Plug-in Facilities.....	763
Collecting Database Statistics— <i>gstat</i>	763
<i>gstat</i> command-line tool	763
Monitoring Locks.....	774
Locking in Firebird	774
The Lock Manager Module	774
The Lock Print Utility	777
Lock configuration settings	796

39 Backing Up Databases	799
<i>gbak</i> or <i>nBackup?</i>	799
The <i>gbak</i> Utility	800
About <i>gbak</i> Backup Files	800
<i>gbak</i> 's other talents	801
Database backup & restore rights	802
Running a Backup	803
Running a Restore	807
Restore switches	809
Using <i>gbak</i> with the Firebird Services Manager	813
<i>gbak</i> Error Messages	815
Incremental Backup Tool (<i>nBackup</i>)	818
About <i>nBackup</i>	819
Making Backups	820
Restoring from <i>nBackup</i> Files	824
Using the Freeze Utility	825
SQL Support for <i>nBackup</i>	826
<i>nBackup</i> command-line options summary	828
Database Shadowing	828
Benefits and limitations of shadowing	828
Implementing shadowing	829
Replication	833
“Warm Backups”	833
40 The Services Manager	835
About the Services Manager	835
Accessing the Services Manager API	835
Services Manager Clients	836
The <i>fbsvcmgr</i> Utility	836
Using <i>fbsvcmgr</i>	836
<i>fbsvcmgr</i> specifics	838
Services API Functions	839
Part IX Appendices	841
I Internal and External Functions	843
Internal Functions	843

Conditional Logic Functions	843
Date and Time Functions	844
String and Character Functions	846
BLOB Functions	851
Mathematical Functions	852
Trigonometrical Functions	854
Binary Functions	855
Miscellaneous Functions	856
External Functions	857
Conditional Logic Functions	857
Mathematical Functions	858
Date and Time Functions	863
String and Character Functions	866
BLOB Functions	871
Trigonometrical Functions	872
Building regular expressions	876
Characters	876
Quantifiers	878
OR-ing terms	879
Sub-expressions	879
Escaping special characters	879
II Reserved and Non-Reserved Keywords	881
Keywords	881
III Context Variables	893
About Context Variables	893
IV Firebird Limits	895
V System Tables and Views	899
Metadata Tables	899
System Views	922
Monitoring Tables	924
VI Character Sets and Collations	933
Implemented and Activated Character Sets	933
VII Firebird Error Codes	939
VIII SQLSTATE Codes	961
IX Database Repair How-To	969
Indications of Possible Corruption	969
Preparing for Analysis and Repair	970

Steps for Recovery Using Command-line Tools	971
Step 1.....	971
Step 2.....	972
Step 3.....	972
Step 4.....	972
Step 5.....	973
Step 6.....	973
Failed Repair.....	973
X Default Disk Locations	975
XI Healthcare for Databases.....	983
Considerations for a Maintenance Regime	983
1 Backups	983
2 Garbage Collection	984
3 Index Statistics.....	986
4 Page Size	990
5 Disk Usage.....	990
Other Considerations.....	991
Usage Monitoring.....	991
Data Access and Security.....	991
XII Upgrade Scripts.....	993
Security Database	993
Metadata Repair	996
XIII Application Interfaces	1001
Application Development	1001
Dynamic client/server applications	1001
The Firebird Core API	1002
Application interfaces using the API.....	1002
Designing Databases for Client/Server Systems	1004
XIV Resources.....	1009
Free Documentation	1009
Books	1009
